

WMF PROGRAMAT GV

»From 0 to
1000 Cups
in one hour!«

1000 cups of freshly
brewed coffee per hour!
High performance
and savings
at the same time.

Containers for 2 different
types of coffee – always
accurately measured and
freshly brewed.

From 1.5 to 100 liters of
coffee – it's as simple as
pressing a button! Brewing
into carafes or storage
containers.

Automatic double-portioning from
the storage container accurately
measures each hot beverage and
dispenses it into storage
containers of the same size.

Fully automatic cleaning of the basic
machine – it's as simple as
pressing a button – always guaranteed
cleanliness.

The preparation of coffee in small
portions is an art in itself. Accurate
portions of ground coffee and water as
well as the shortest possible time
between preparation and consumption
guarantee for a good coffee.
If large quantities of coffee are
required, the aroma is often lost. Not
with the new WMF PROGRAMAT GV!
Not to mention all the additional
financial and technical advantages that
make the new WMF PROGRAMAT GV
even more attractive.

WMF PROGRAMAT GV

The secret to fresh coffee
even in large quantities ...
... including big savings!

Better quality coffee at reduced operating costs is that possible?

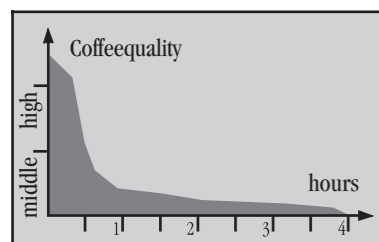

Yes – that's possible!

Our aim was to combine better quality coffee and reduced operating costs in one coffee machine.

The new WMF PROGRAMAT GV is the product of this successful combination!

Until now

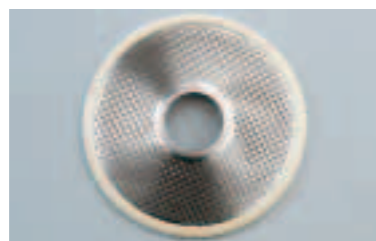

There was too much time between preparation and consumption of the coffee. The beverage lost its aroma very quickly. A waste of expensive ingredients and your reputation down the drain!

With the WMF industrial size coffee brewing system the preparation of hot beverages for your clientele costs you approx. 2 1/2 man-hours (at a capacity of 125 l). In addition, there are another 1 1/2 hours worth of service and cleaning time. Furthermore, the frequent changing of paper filters, imprecise portioning of ground coffee and beverages, special packaging etc. incur even higher costs.

Now

you have the opportunity to lower the costs of preparing of coffee and tea. At the same time you can improve the quality of your coffee where it counts – with your clientele.

The WMF PROGRAMAT GV reduces the time between preparation and consumption of the coffee by more than half. The fully automatic and easy-to-learn operation of the WMF PROGRAMAT GV allows you to dispense the first coffee after just a few minutes. Its automatic refill-brewing process replaces dispensed coffee in the storage container. Fresh coffee will be brewed until the quantity you pre-selected is reached. No loss of aroma through storage.

Instead of using paper filters, the WMF PROGRAMAT GV is equipped with a micro-fine filter made of stainless steel. This allows you to reduce material and personnel costs required for changing and cleaning filters.

The compact exterior of the WMF PROGRAMAT GV and its movable cart, make it highly flexible, no matter where it is installed. Its automatic cleaning cycle minimizes cleaning time, the cost of cleanser and daily waste!

WMF PROGRAMAT GV – better quality coffee despite comprehensive cost reductions ... how much more can you ask for?

WMF PROGRAMAT GV. Compact and Effective.

In a compact size, W 550 x H 1005 x D 510 (basic machine without heating unit) and W 1000 x H 1005 x D 510 (basic machine incl. 20 liter storage container) respectively, WMF has combined features which reduce operating costs, increase productivity and help to maintain the same coffee quality:

1 Coffee is always freshly brewed, including a second variety of coffee.

The containers always hold two different varieties of coffee so you can choose between normal and caffeine-free coffee.

2 Ground Coffee is always measured accurately!

The ground coffee portioning device exactly measures the coffee needed for the pre-selected quantity of coffee. No more, no less. No more fluctuations and special packing!

3 No more changing of paper filters!

The micro-fine filter made from high quality stainless steel guarantees optimal preparation conditions and a neutral coffee aroma without changing filters. This allows you to save time and more importantly money!

4 Effective use of personnel!

The automatic timer, which is available upon request, regulates the brewing of the first 20 liters automatically. During this time, your personnel can be used more effectively for other jobs or man-hours can be reduced.

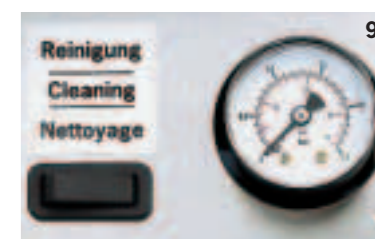

5 Up to 100 liter of coffee — it's as simple as pressing a button!

The brewing pre-selection dial allows you to select from a variety of brewing quantities, from small ones, 1.5 liter, to very large ones, 100 liter. The coffee is brewed into a carafe or a storage container – it's as simple as pressing a button.

6 Always fresh coffee!

If you connect a heatable 20 liter storage container with automatic refill-brewing to your "PGV" and select the desired brewing quantity, the brewing process is stopped automatically after the storage container has been filled. The refill-brewing system ensures that dispensed coffee is replaced with fresh coffee once the minimum level is reached. Fresh coffee is brewed until the pre-selected quantity is reached.

7 Hot beverages — always accurately measured!

The automatic double-portioning system is integrated in the storage containers 6620.0 and 6620.1 and can be adjusted to any container volume. The auto-stop mechanism stops dispensing when the liquid in the container reaches the limit contact—provided the containers are the same size. A storage container for filling large cans is available as an optional accessory. Hot water can be dispensed in portions directly from the machine.

9 Guaranteed Cleanliness!

The fully automatic cleaning cycle is activated by simply pressing a button; only the cleanser powder has to be refilled. The basic machine is cleaned in an absolutely thorough and reliable fashion. You can save time and cleanser, and also prevent waste and superficial cleaning which may affect the quality of your coffee!

8 Easy-to-learn operation!

All functions can be activated through a clearly laid out keyboard. "Human error" can be largely avoided!

Those are the extraordinary advantages of the new WMF PROGRAMAT GV. They ensure the machine's superior price-performance ratio in preparing large quantities of coffee.
